 Other Requests _____

Use the second page for more detailed styling requests.

Is this a Technical Restoration? ___No ___True to what you sent us. ___ True to original.

Note: A technical restoration is the service of maintaining the original styling of your frameset. Photographs of the frame and fork are taken to ensure duplicate masking, paint, and decal placement. Technical restorations are always subject to decal availability. A non-technical restoration results in styling that is representative of a vintage. We use current technology paints and clear coat over decals on all restorations unless specifically agreed to otherwise.

Instructions - Services performed by Waterford Precision Cycles:

1. Complete the form above. Include the supplemental styling sheet if special finishes are desired.
2. Please remove all parts from the frame. Any components remaining on the frame will be removed at the factory for a fee. We will not reinstall components.
3. Please call our restoration department to receive a Return Authorization number prior to shipping your frame. Doing so guarantees timely service. Please write the RA # on the box next to the shipping label.
4. Please insure your shipment at a reasonable replacement value and obtain a tracking number.
5. After Waterford's receipt of the frame you will receive correspondence from our restoration department. We will solidify details and provide a quote that includes an invoice and work order. The invoice and work order must be signed, returned, and payment received before work begins.
6. Waterford is responsible only for delivering what is on the work order.
7. Occasionally we discover problems with a frame and fork only after we begin working on it. If we find a problem, Waterford will contact you to determine the best course of action. Waterford is not responsible for unforeseen or unreported damage. If the order is canceled, Waterford will charge for return shipping and work performed prior to the found damage.
